

**Ques1. Tell me about yourself**

Hi, my name is rahul, I am an aspiring web developer,  
I live in Delhi and belongs to Uttar Pradesh.

Let's come to my educational background,  
I am currently pursuing my full-stack web development course from Masai school,  
I am also pursuing my graduation from Delhi university.

Let's comes to my technical skills,  
my current tech stack is MERN stack.  
I have built a various variety of projects using MERN stack, some of them are clones of  
well-known products like ONNBikes and go fund me.  
I am also good at data structures and algorithms, I always used to spend my free time on  
GFG and leetcode.

That's all about me, thank you.

**Ques2. what are your strengths?**

My biggest strengths are that I am hardworking, trustworthy, flexible, and a good team  
player.

**Ques3. what are your weaknesses?**

I love to help others but sometimes that costs me my own studies and time. And I also try to  
do multitasking and that ends up being both tasks average.

**Ques4. why do you want to work for our company?**

I have always looked towards organizations like yours to kickstart my career. I believe  
with the right atmosphere at the workplace, anyone can achieve much more than  
working at an unappreciative workplace.

**Ques5. how did you hear about the position?**

Our placements manager at Masai informs me about that position.

**Ques6. What are your career Objectives? /where do you see yourself 5 years from now?**

In the next 5 years, I see myself working as a senior software developer and building  
software that could be a game-changer for the company.

**Ques7. What is your greatest personal/professional achievement so far?**

As an arts student, I never thought that I would become a software developer. It wasn't easy but my reasons for doing this never let me give up, and now I can proudly say that this was my biggest achievement so far.

**Ques8. Tell me about a team project you did at work. What was your role, and what was the outcome?**

so during my Masai journey me and my two teammates worked on a bike rental website clone.. which is known as Onnbikes... My major role in that project was to clone the home and bike Store page. That was my first project. I never wrote that many lines of code before. We faced a lot of problems but it was worth it, judges also appreciated our work.

**Ques9. what does your perfect day/ workday look like? Take me through it.**

After waking up before everything I used to solve at least 1 or 2 DSA questions which I found hard on the previous day because morning time is best for thinking after that I used to do my breakfast and common stuff after that I use my LinkedIn for some time to get an update of what is happening in technical industry. And then either start working on my pending projects or learning some new framework or library etc. once I got tired from learning or building I used to watch Netflix or spend time with family and in the night after having my dinner I start solving some new DSA questions.

**Ques10. why did you join Masai school?**

So, technical things like programming and hacking kind of things always fascinated me when I was in my school, but because of bad company and lack of knowledge I chose arts field and lost my dream. But one day while scrolling youtube I found a video about Masai school. I still remember how excited I was on that day. And I gave my 100% to crack the entrance test because Masai was my last hope to fix my mistakes. So that is why I joined Masai.

**Ques11. What has been your experience at Masai school?**

It was a wonderful experience in Masai. Apart from technical skills, I have also learned time management, soft skills, etiquette etc. sometimes I can't believe that I learned that much in just 6 months. I didn't know anything about programming but now I can confidently say that I can build an end-to-end application.

**Ques12. Why should we hire you? / Why do you think you are eligible for this job? / How can you contribute? / How will you be an asset for our company?**

I have all the skills that you are looking for, I can easily adapt to a new tech stack and I have a good understanding of javascript behind the scenes concepts like closures, hoisting, etc. I am also good at data structures and algorithms which really helps me to think of edge cases while writing my code. apart from my technical skills, I am also hardworking, consistent, and passionate about coding. On the basis of these skills, I can confidently say that I am perfect for this role.
